The Barn, on the south lane was built under Lund Washington's supervision in 1782. Lund Washington was the manager of the estate at the time. All materials used in the construction were found close at hand. Bricks were moulded from clay found on the estate, mortar was made by burning oyster shells in a kiln at the river's edge to obtain the lime, and then the lime was mixed with river sand. Lumber for all purposes except the shingles, which were of cypress and came from the Dismal Swamps, came from the nearby woods.
